

McAfee ePolicy Orchestrator

Security management software for systems, networks, data, and compliance solutions

Connect Security to Your Business with McAfee ePO

Centrally manage enterprise security

- Open framework unifies security management for systems, applications, networks, data, and compliance solutions
- Extensible platform integrates with and leverages your existing IT infrastructure

Take action with confidence

- Comprehensive views of your security status and threats—both external and internal—provide the insight you need, when you need it to proactively address security issues
- Actionable dashboards with advanced queries and reports shorten time from insight to response
- Rogue system detection identifies unknown assets on your network so you can bring them under control

McAfee® ePolicy Orchestrator® (McAfee ePO™) software, the foundation of the McAfee Security Management solution, unifies management of endpoints, networks, data, and compliance solutions. More than 45,000 customers use McAfee ePO software on nearly 60 million nodes to manage security, streamline and automate compliance processes, and increase overall visibility across security management activities. With its scalable architecture, fast time to deployment, and ability to support enterprise systems, McAfee ePO software is the most advanced security management software available.

Today, more than ever, IT organizations are taking a strategic approach to security—consolidating security portfolios to reduce complexity, investing in next-generation technologies to improve protection, and integrating with existing IT assets to streamline processes. McAfee ePO software enables tens of thousands of customers to centrally manage security, achieving dramatic efficiencies.

Extensible Workflows Streamline Security and Compliance Processes

McAfee ePO software allows IT administrators to unify security management across endpoints, networks, data, and compliance solutions from McAfee and third-party solutions. McAfee ePO software provides flexible, automated management capabilities so you can identify, manage, and respond to security issues and threats. You can define how McAfee ePO software should direct alerts and security responses based on the type and criticality of security events in your environment, as well as create automated workflows between your security and IT operations systems to quickly remediate outstanding issues. As a result, you save time and money—with a more effective security program. McAfee ePO software helps you drive down the cost and complexity of managing security.

Automatic and simplified workflows:

- Streamlined installation, guided configurations, and quick-start deployment capabilities help you secure your environment quickly—and keep it secure
- Automated policy assignment, task scheduling, and incident responses deliver rapid mitigation capabilities
- Automated communication within and between endpoints, networks, data, and compliance solutions reduces security gaps and management complexity
- Rogue system detection identifies unknown assets that gain network access, enabling faster mitigation and increased protection
- Customizable report templates, personalized for diverse audiences with run-time parameters, reduce report development time
- The new web application programming interface (API) allows you to more fully leverage existing enterprise assets and streamline workflows to enhance efficiencies and simplify compliance efforts

Administrators can configure McAfee ePO software to their environment, delivering customized, actionable dashboards in a drag-and-drop environment supported by automated reports and workflows.

Connect Security to Your Business with McAfee ePO (continued)

Reduce complexity and streamline processes

- Guided configuration, automated work stream, and predefined dashboards make getting started a snap
- Tag-based policy assignment precisely targets assignment of predefined security profiles to systems based on their business role or at-risk status
- Task catalog and automated management capabilities streamline administrative processes and reduce overhead
- A single web interface aligns security processes for maximum visibility. A single agent reduces the risk of endpoint conflicts.

Scale for enterprise deployments

- Enterprise-class architecture supports hundreds of thousands of devices on a single server
- Supports complex and heterogeneous IT environments
- Enterprise reporting across on-premises and Security-as-a-Service (SaaS) security information

Figure 1. McAfee ePO's drag and drop dashboards enable users to monitor their security infrastructure at a glance.

Achieve end-to-end visibility:

- A unified point of reference for enterprise security enables you to quickly identify and understand relationships between security events throughout your environment
- A personalized web console provides flexibility for managing enterprise-wide security
- Advanced charting, flexible query capabilities, and support for querying external data offers at-a-glance understanding of complex issues
- Actionable dashboards with drag-and-drop allow you to include custom URLs

Enterprise-Class Architecture Dramatically Reduces Costs with Proven Scalability

As the industry's most scalable security management software, McAfee ePO software reduces both operational and capital costs of security administration. McAfee ePO software allows enterprises to manage hundreds of thousands of devices and security information, across both on-premises and SaaS deployments, with a single server, dramatically reducing costs associated with enterprise deployments. The scalable architecture and performance enhancing capabilities of McAfee ePO software help reduce bandwidth costs and ensure reliability of the management infrastructure.

Scalability features include:

- Highly scalable server reduces infrastructure and maintenance costs
- Agent handlers allow management of endpoint systems, even when disconnected from the network
- New repository replication methods reduce bandwidth consumption to make more efficient use of slow-speed WAN links
- Policy sharing across servers and roll-up reporting reduce administrative overhead
- Flexible policy administration supports complex environments
- Comprehensive reporting and analytics across on-premise and SaaS security information
